- (1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;
- (2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used.
- (3) Ways to enhance the quality, utility, and clarity of the information to be

collected; and

(4) How the agency might minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of response.

**Abstract:** This information is being collected for the purposes of understanding 1) the continued feasibility of implementation of ShakeAlert-powered alerts through the Wireless Emergency Alerts via the Integrated Public Alerts and Warning System (IPAWS) managed by the Federal Emergency Management Agency, and 2) the latency of transmissions in California, Oregon, and Washington. This collection is critical to determine technological latencies of the Integrated Public Alerts and Warning System, managed by FEMA and used by the U.S. Geological Survey to send ShakeAlert-powered alerts. Better understanding is required to know how much time people will have to take protective actions once they receive an alert. Further, knowledge of where the latencies exist and why can help us improve and streamline our systems. This involves live testing of the system with a population reporting back to us.
